Objective

To leverage my expertise in MERN stack and passion for learning in a Software Engineering role that challenges me to continually expand my skillset and contribute to the development of innovative software solutions.

Work Experience

Internee

Algolix Technologies (*May 2022 – July 2022***)**

During my academic journey, I undertook a rewarding internship at Algolix Technologies, where I honed my skills in ReactJs (basics) and JavaScript. I actively contributed to coding, unit testing, bug fixing, and documentation, collaborating seamlessly with the software engineering team to ensure timely project deliverables.

Internee

Office of ITRCDB (University of agriculture) (*Sept 2021 – March 2022***)**

During my tenure as an intern at the IT Office of UAF, I gained hands-on experience in SQL server and actively contributed to their Learning Management System (LMS). With responsibilities including database management and coding, I collaborated closely with the developer team to ensure timely project delivery.

Projects

Livestock management: The livestock management web application allows customers to view data related to cattle through a CRUD table. Managers of farm can add, edit, and delete data related to cattle, such as breed, weight, and vaccination status. The user-friendly interface ensures easy access to relevant data, making it easier for farmers and other stakeholders to manage their livestock. The application can be accessed from any device with an internet connection, making it a convenient tool for livestock management.

JavaScript (Local storage), Bootstrap, Html, CSS.

Portfolio: My portfolio website is a static website that showcases my professional profile and highlights my skills, experience, and projects. It provides a user-friendly interface that enables potential employers to learn more about me and my work. The website is designed to complement my CV and serves as a platform to showcase my accomplishments and expertise.
