EXPERIENCE

Digiware Solutions, Lahore

JANUARY 2023 - PRESENT

I did an **internship** on React JS at Digiware Solutions. In my three to four months experience I learnt the basics of HTML, CSS, JAVASCRIPT and focused more on ReactJS.

PROJECTS

Crud Operation

I developed a CRUD operation App by using React JS in a functional component. In the CRUD app, I create add, delete, edit and read data functionality for dynamic form elements and do event handling.

Dynamic multiple form Handling

I also worked on dynamic multiple form handling. And each form has a separate dynamic delete button. A user can create multiple forms to click on add button and one more button name add data when user add data in multiple form and click on add data, the result will show in console. And also implemented validation on it.

Expense Tracker

I also developed an expense tracker; in this app I used a separate component and some input field that takes data and gives the output when the user wants to print the whole month's expenses.

Fiverr Clone

I also developed a fiverr clone (In-process). In this application I did the following:

- 1 - Implemented search filter
- 2 - Gig data fetching and showing up in a grid
- 3 - Gig Detail Page
- 4 - Authentication (Login / Signup using custom backend nodejs + Expressjs + mongodb)
- 5 - User Dashboard for

- Adding new gig
- Editing Existing Gig
- Deleting Gig
