## PROJECTS

### Private Plane Booking System

- Private Plane Booking System is an automated system where the user can book a private plane according to their requirements.
- Used JAVA and OOP for this project.

### Checkers Game

- Python language and pygame (a set of Python modules designed for writing video games) were used to make this game.
- Minimax algorithm was used as it was the best option for making turn-based games.

### FYP: PetHub Mobile Application (01/2023 - Present)

- PetHub is the perfect online marketplace to **buy, sell and adopt pets** locally.
- Technologies used are react native for frontend and python for backend.

### Valusoft (02/2023 - Present)

- Dubai-Based **Real Estate and Construction Management** web application.
- Implemented responsive user interface using Angular framework along with HTML, CSS, and Bootstrap, integrating with APIs and backend services.
- Implemented a reusable component library.
- Collaboratively working with a team of 3 to successfully deliver the project.

### Belsio CRM (11/2022 - 02/2023)

- Customer relationship management (CRM) solutions **enable businesses to store and manage all their customers' data**.
- The CRM was designed on Adobe XD and implemented using HTML, CSS, TypeScript, and Bootstrap. Angular framework was utilized in its development.
