PROFESSIONAL EXPERIENCE

INTERNSHIP PUNJAB INFORMATION TECHNOLOGY BOARD, Lahore, Pakistan
Front-end Developer (Design in Bootstrap 5), March - August (2022)

Outline:
The visual and interactive components of a website are built using HTML 5, CSS 3, Bootstrap 5, JavaScript (ES6), and ReactJS by front-end developers. They collaborate with front-end and back-end developers to combine design and functionality, optimize web pages for various browsers and devices, generate reusable code, test and debug pages, remain up to date with technology, and enhance website performance and accessibility.

Key Responsibilities:
- To plan and design the structure and design of web pages. Monitor the project to ensure timely
- Developing and implementing user interface designs using HTML 5, CSS 3, Bootstrap 5, JavaScript (ES6) and React Js
- Integrating website functionality and design seamlessly with designers and back-end developers
- Ensuring that web pages are optimized for different devices and browsers
- Creating reusable code and libraries for future use
- Writing code that is maintainable and easy to understand for other developers
- Testing and debugging web pages to ensure they function properly
- Staying up to date with emerging trends and technologies in web development to continuously improve skills and knowledge
- To develop website features that can enhance the user experience
- To strategize design choices according to user experience
- To implement design for mobile sites.
